Venue: AU TVS CQM

(Behind Vivekananda Auditorium, Anna University)

SIX SIGMA GREEN BELT

The process aspects of the Six Sigma methodologies is fundamental to any process in a business. If any business is not practicing the Six Sigma methodologies as a process, then they probably will experience disconnects between their Customer's Critical Criteria, their Expectations, and the delivery of Quality products or services. Six Sigma deployments focus on the customer expectations, and concentrate on the best applications of scarce resources within the organization to those processes that substantially contribute to the bottom – line profitability of the organization.

To achieve this, Six Sigma uses a methodology known as DMAIC (Define opportunities, Measure performance, Analyze opportunity, Improve performance, Control performance). Six Sigma methodology can also be used to create a brand new business process from ground up using DFSS (Design for Six Sigma) principles. Six Sigma strives for perfection. It allows for only 3.4 defects per million opportunities for each product or service transaction. Six Sigma relies heavily on statistical techniques to reduce defects and measure quality.

Program Objectives

- To evoke an appreciation of the Six Sigma concept to sustain a culture of process and result oriented improvement.
- To impart the strong conceptual framework and the practical skills on the appropriate tools and techniques at the specific place of work to take up Black Belt Projects.

Resource Faculty A highly Specialized Unique Panel will provide rich knowledge from Academia & deployment skills from Companies.
