Introduction

The initiative to form INDO-GERMAN Water Network was made during the bilateral talks between the Indian Department of Science and Technology (DST) and the German Ministry for Education and Research (BMBF) in September 2008, to develop strong partnerships for future collaboration in research and development. The network emphasizes on the need for applied sciences as a tool for adaptation to bring scientific research into practice. The network shall comprise partners from the academic field, public and private sector to seek a comprehensive approach to water supply and wastewater management aspects.

The proposed workshop on “STRATEGIC PLANNING FOR WATER SUPPLY AND WASTEWATER MANAGEMENT” addresses one of the most crucial issues related to infrastructural development in the urban sector. Strategic Planning requires close interaction between decision-makers and technology providers to achieve sustainable development. It discusses various strategic approaches with respect to design, operation and maintenance of water supply and wastewater system and it looks at possibilities of integrating such approaches into the current practices in India.

Stakeholders with technical and planning background are invited to present and exchange their views on the following:

- Sewage systems and wastewater treatment
- Maintenance strategies, benchmarking
- Water treatment and water recycling strategies
- Biogas and biomass
- Software solution for economic design of sewerage and water supply networks
- Financing and funding opportunities
