ABOUT THE WORKSHOP

LaTeX was first developed in 1986 by Leslie Lamport, and is now being maintained and developed by the LaTeX3 Project. LaTeX is a document preparation system for high-quality typesetting. It is most often used for medium-to-large technical or scientific documents but it can be used for almost any form of publishing. LaTeX is not a word processor. Instead, LaTeX encourages authors not to worry too much about the appearance of their documents but to concentrate on getting the right content. LaTeX is based on the idea that it is better to leave document design to document designers, and to let authors get on with writing documents.

This workshop aims at giving a background knowledge about LaTeX and to make PG Students and Ph.D. scholars excel in writing proficient paper and thesis.

TARGET AUDIENCE

Target Audience include Research Scholars, Faculty members and Final year UG/PG students from Engineering Colleges. No TA and DA will be provided to the participants.

On prior request from the participants, accommodation may be arranged in lodges at their own cost.
