

Anna University – Ryerson University
URBAN ENERGY CENTRE

A delegation with members from Canada and Korea is to visit Anna University-Ryerson University Urban Energy Centre (AU-RU UEC) during the month of February 2012 to discuss about an International project in the area of 'Water Purification'. The deliverables of the project include products of water purification systems with modern technologies meant for rural areas as single family and village scale usage.

Some of its characteristics could be:

- a) use of solar energy
- b) perpetually useable filter technology – to remove sediments
- c) chemical correction for inorganic pollutants such as arsenic and organic pollutants.
- d) robust design

In this connection, we wish to invite members of the faculty and research scholars of our University, who can address the above topic and actively take part in the proposed project.
